Low-Level X-Ray Emission from the Norma Arm. The 1.8-4 keV range of X-ray emission from the Norma arm has been measured with an e(a) Ge detector. The X-ray spectrum can be fitted with two components: (1) a power law with λ shape and (2) a blackbody (circles) with $I(0)$, T , and β (in keV at 1 keV) values of 0.78 ± 0.15 , 25.2 ± 1.2 and 0.3 ± 0.08 , respectively. The latter component may be produced by thermal processes, such as chromospheric evaporation. The X-ray intensity varies with the Galactic latitude. This may be due to a variation in the direction of the Galactic rotation across the Norma arm, which may be due to gas expulsion, formation of a bar, or other aspects of Galactic structure. Lean Startup: 5 questions - michael_fine Anyone have some good resources on Lean Startup? I've been reading Chris Guillebeau's book and have a few questions. ===== davidw It sounds good, but I just had a quick look at the stuff they have on their homepage: There's little that's really 'lean', some pretty useful links, but not much other than that. Ion transport and cell volume regulation in lymphocytes: mechanisms and functional implications. Recent evidence indicates that in lymphocytes, volume changes affect both the rate of calcium efflux from the intracellular stores and the rate of bulk calcium influx from the extracellular milieu. Moreover, lymphocytes appear to be unusually sensitive to the effects of a variety of agents (e.g. osmotic shift, agents which alter membrane potential, metabolic inhibitors, etc) which are known to affect volume regulated ion channels in other cell types. The implications of these findings for the nature and mechanism of volume regulated ion transport and cell volume regulation in lymphocytes are reviewed. What I experienced with Sunrizer's implementation of Python is exactly what I was looking for. I found its combination of musical purity and high-end programming to be an ideal pairing.
