The author critically discusses the contribution of psychosomatic medicine to the clinical practice of psychiatry and psychotherapy. He notes the frequent and confusing use of the terms "psychosomatic" and "psychosomatic medicine" interchangeably in the literature. The author presents the different interpretations in current psychoanalytic literature and in the interpretation of the psychosomatic illness. He emphasizes the principles of the psychoanalytic concept of the "psyche", and the consequences of this concept in the psychoanalytic concept of the "psyche-soma" and in the psychoanalytic approach to medical illness. The author considers the clinical usefulness of the "psyche-soma" concept and explains that the psychic concept of "drive" for "goal-directedness" 0cc13bf012

Recent studies from the human immunodeficiency virus (HIV-1) and the related simian immunodeficiency virus (SIV) have greatly improved our understanding of lentiviral pathogenesis. HIV-1 infection is associated with the gradual loss of CD4+ T cells, a disruption of immune function, and eventual death. CD4+ T cell depletion is likely mediated by direct infection of CD4+ T cells and by dysregulation of cellular signaling resulting in T cell death. However, protection against HIV-1 infection is incomplete, suggesting that viral components may contribute to pathogenesis. Indeed, these studies suggest that high-level expression of the HIV-1 envelope glycoprotein (gp) can induce apoptosis of the CD4+ T cell, and this activity may be important to viral pathogenesis. Furthermore, HIV-1 replication capacity is enhanced in cells expressing a number of viral accessory genes, including vif, vpr, vpu, and nef. Although the initial function of these genes is not known, their effects on viral replication may be significant. Moreover,
