trainingQ: How to
construct a trait which
contains a Generic I have
a trait where I have a
method take of type

Function[T, (T,Int)], this is a function taking a generic type T and returning a (T,Int) pair.

Now I also have a generic class which takes a Function[T, (T,Int)] as an instance argument and has methods to create instances of this generic class. The problem is, when I try and use this

method like so: object
Main extends App { class
Class[T] { def value(f:
Function[T, (T,Int)]) : Int
= { val (x, y) = f x.toInt
} } val val1 : T = -1 val
val2 : T = -2 val f1 : Int =
10 val f2 : Int = 20 val
class1 = new Class[T]()
val class2 =
class1.value(f1, f2) val g
= new Class[T]() val x =
g.value(f1,f2) } it

generates the following
error: value(f1,f2) ^

Stigmella pagydorensis *Stigmella pagydorensis* is a moth of the family Nepticulidae. It was described by Leon F. Bruna and McDonald in 2004. It is found in California, where it has been recorded from the Santa Cruz Mountains at elevations of 1100-1700 meters. The length of the forewings is 2.2-2.4 mm. The larvae feed on *Eriogonum umbellatum*. They mine the leaves of their host plant. External links

Why Star Wars VI Is Being Tagged As “Star Wars Episode 7” The Star Wars community wants to know what happened to

the sixth movie and what's going to happen with the seventh. According to a new report from FSW, Lucasfilm and Disney have begun using the tag "Episode 7" for upcoming movies, which is part of a strategy that would show off that it's a part of the larger unbroken narrative. "When I joined Lucasfilm more than four decades ago, one of the things I was told by my founders was that we're all involved in the Star Wars saga. We're all a part of that story. We're all woven into that tapestry that George has woven and that's why there are so many movies. I think the phenomenon of Star Wars will go on for a long time and it's in its second generation now," Kathleen Kennedy told FSW in her first interview since Disney bought the franchise. Here's the full interview.

What, if any, comments has the director, J.J. Abrams, made about the new film? In addition to the various people that you've been talking to that we've managed to get people, you know, listening to, George Lucas and Kathleen Kennedy and you, listening to some things that we say are going to happen in this film and they are trying to figure out where to go

with the films now. I think, you know, even though they❓

Preamble: NSCA, 1996; NSCA, 2004;.
Introduction: Data were collected from NSCA, 1995, J.R. Hoffmann, 2012. If theorems and proofs are needed and not written, the complete proof is in the following Appendix. Original hypotheses were: H0: The NSCA's Guide to Program Design \hat{A} is only suitable

forÂ - It must be used only for all athletes, regardless of ability, who desire to be trained;. Claim H1: NSCA's Guide to Program Design Â is only suitable forÂ - It must be used only for all athletes, regardless of ability, who desire to be trained;. Proof: This theorem is the proof of H1. It is actually presented in the next section, "Theorem 1." Theorem 1: NSCA's Guide to Program Design Â is only suitable forÂ - It must be used only for all athletes, regardless of ability, who desire to be trained;. Preamble: Corollary 1 follows directly fromÂ H1, byÂ definition. Corollary 1: NSCA's Guide to Program Design Â is only suitable forÂ - It must be used only for all athletes, regardless of ability, who desire to be trained;. Proof: By Â definition.Â Â Theorem 1: NSCA's Guide to Program Design Â is only suitable forÂ - It must be used only for all athletes, regardless of ability, who desire to be trained;. Corollary 2 is simplyÂ Corollary 1Â plus the 1st conditional inÂ H0: The NSCA's Guide to Program Design Â is only suitable forÂ - It must be used only for all athletes, regardless of ability, who desire to be trained;. Corollary

2: NSCA's Guide to Program Design is only suitable for - It must be used only for all athletes, regardless of ability, who desire to be trained;. Proof: Corollary 2 follows directly from Corollary 1, by definition. Theorem 1: NSCA's Guide to Program Design is only suitable for - It must be used only for all athletes,
