Xournal is a free software for Windows, macOS and Linux, with powerful features to help you create sketches, diagrams, animations or notes from any digital format. With Xournal, you can create clear sketches or diagrams, easily edit existing drawings, combine any text with image, mark-up complex documents, complete spreadsheets or annotate PDFs. The MPF format is used for storing metadata associated with a series of images. It is a cross platform metadata file format which is stored in the EXIF data of an image. Some of the most commonly used elements of the metadata files are the following: geotags, copyright information and shutter speed. This plugin implements the MPF extension to provide loading of this file type in any context where image data is available. As such it does not provide a standalone viewer. The MOS file format is a text-based file format used for image capturing and storing a variety of metadata. It can be used for images captured by different camera brands including Canon, FujiFilm, Nikon, Olympus, Pentax and Sony. It's main purpose is to provide consistent and standardized metadata so multiple image viewing and editing programs can easily display the metadata of all these camera brands. This plugin implements the MOS extension to provide reading of this file type in any context where image data is available. As such it does not provide a standalone viewer. To use this plugin, please install the GIMP 1.2.11 software. Instructions can be found here . An official plist converter is also included. Pilihkan dengan klik '+' di daftar opsi.
