Firstly open Microsoft tool and select the option for extraction of the file, and then select the file path. As the file requires root permission, so it will prompt the need to request the same, which can be achieved by selecting the check box on the upper right hand side of the interface. The files being extracted will be shown in the output panel. Once the file is extracted, just open the required file using the "Word or any similar viewer". And then follow the onscreen instructions in order to complete the process. You may also take help from our Flash File Support. You can check the file "Flash File" status and previous status in the "Current Flash Status" and "Received Flash Status" sections. You can also move the file with the help of the "Select file" and "Move file" option below the file information. By selecting one of these options, you will also be able to save the specified file. And the file will be stored in the phone storage device. After the process, you have to go back to "Settings", in the "Configure recovery" page and then select the status called "Flash file recovery". You can also go to "Settings", then "Current Flash Status" and check the information. If all goes well, then your phone settings are successfully restored. This page will give you detailed information about how to install the flash file firmware on theLava iris 820. This page will also include the flash file firmware and flash tools downloaded on the pc and the phone will be able to connect to your pc. So don't forget to follow the guide to flash theLava iris 820 on your computer. 5ec8ef588b
