For example, there's currently no Layer Mask, Fill, or Spot Adjustment features in Elements. Also, the Elements editing tools aren't as intuitive as Photoshop's, and there's no Pixel Preview option. The easiest way to create a smart object is to choose an element from the Smart Brush palette, such as a set of stars. Start by opening a new file and working on a layer above the Smart Brush layer. When you want to use any element you have saved as a smart object, you... ...just load the Sprite into any layer, and the element is loaded, ready to add to any other layer. All you have to do is move the element out of the smart brush palette so that it isn't visible. First, I would like to stress that Lightroom 5 is a free update of a program that introduced many changes in its 5-year-old update. The result is a program that, compared to its prior version, is more easy to master. Unfortunately, the latest version is still not perfect, so I would advise caution if you decided on the new version. And I still believe in Lightroom 4 despite these flaws. Lightroom 5 improves its entire process of cataloging and handling images and this time there is not only a little bit to say about that. However, you can still check it out for yourself in the Adobe Photoshop & Lightroom website . Also, please keep in mind that I am not an Adobe Expert, I am just a newbie myself. I am therefore likely to miss a lot. That is why my comments are mostly impressions, of all the new or considerably modified features.
