I'm using a mix of the new tools in Photoshop and the new tools in Photoshop Elements, like curve and adjustment layers. You can make subtle changes to the images within the edited file, so it's easy to try out different ways of making changes.

With Lightroom CC 2017, you can duplicate a whole editing session, choose a template of the duplicate, and look for the features. Using a template in Adobe Photoshop allows you to use fine-tuning features while you are editing the photo. This is because the automatic features will not be able to get the quality you want. It is a simple and actually a very powerful tool to use that allows you to create a template in less than a minute.
