The new color picker UI is quite slick, reflecting not just the best elements of the Eye-One/Two color wheels, but also some good UI updates from Photoshop. Unfortunately, the performance of the color picker has been an unwelcomed side effect of all the changes. Fortunately, there are a number of fixes available in the Photoshop 2020 release that should help with the use of this from now on. Photoshop CS4 draws heavily from 2D and 3D pipelines and tools introduced in the Substance product line of 3D tools. The 3D engine underlying Photoshop CS4 works as a 2D tool surface to enable you to dynamically view and work on image data in a 3D scene. By pushing content to a side of the screen, you can view and edit that content in a three-dimensional space. To change perspective of a project, you can move your canvas through a three-dimensional casting and manipulate individual layers, brushes, and masks along with pixels, shapes, and other content. Whether it's rendering real-time 3D, working with high-resolution 2D pixel layers, or navigating layers to edit an image, the benefit of working in a native 3D space for Photoshop CS4 are the new tablet integration capabilities including transformed and multitouch gestural interaction. CS4 offers more features and capabilities within the 3D space and more native interaction with Photoshop tools available on the canvas. From being able to zoom in and out of content on the 3D stage, examine individual layers and Layers panel pixels, or pin individual brushes to the stage to work with layered content. All interactions in a 3D stage are dynamic and responsive. When you rotate a design inside of the 3D canvas, the entire

experience will react to your selections and movements on the stage.
