My initial impression was that the Fine Hdr did much of what the Auto-Hdr did and with more effective control. At times, however, the Fine Hdr seemed to struggle to save picks, even after my changes seemed to cure the problem. I shouldn't be surprised by such behavior considering the price – the Fine Hdr retails for $69 right now, while Auto-Hdr is $29, and Auto-Hdr Fine is $49. The Fine Hdr does have a more extensive library of reference images and exposure ranges which can help in these calculations (if you've got the technical background). Adobe indicates that Fine Hdr has a number of issues that have yet to be ironed out. Personally, I haven't found a lot of them, but I've made edits that I feel should be easier for Fine Hdr to handle. Too bad Fine Hdr still doesn't seem to work out of the box on some of the newer and more expensive cameras. Is This a Good Camera? While the basics of evaluating exposure in the camera's native raw converter are pretty self-evident (reducing shutter speed, increasing ISO, and selecting M mode), there's a bit of a gotcha with the print settings that make me think bare-bones is the way to go. Since I have no interest in printing after this review, I've shoved that issue aside. What I've been concentrating on is how to best expose digital negatives. Thankfully, this isn't very difficult. It will also give me some new practice with better exposure. As you should already know, Adobe recognizes your friends on Facebook. So it's no shock that some silly company in California has to suss out your friends now too. Facebook tells them, and their creepy friends tell them. I don't know why Facebook spies and shares for their profit. They're doing a whole new kind of social surveillance.

Using Image Masks is another way to add some artistic touches to an image. You can quickly add masks, or range of colors to the picture. Simply go to Image > Mask and choose a color from the palette. Image Masks work by masking out the parts of the image that you want masked out. You can use this feature to soften transitions, key out a specific area, or create a textured surface. With "Share for Review," Photoshop users can share, review and publish images in a single workflow without having to leave Photoshop. Images can be grouped into projects and shared for other people to collaborate on. You can also quickly rollback changes, or if the change wasn't successful, you can easily toggle back to the state of the image before the period of editing. Additionally, it can be downloaded as a Photoshop Document, which allows for greater flexibility and access in the future, fewer sync conflicts and greater compatibility across other platforms. Uniquely, a powerful new module feature in Photoshop allows for selective image manipulation in a browser, even without editing software installed. This new feature is called the "Sandbox," and it's being introduced today as part of the new Real-Time image editing experience in Photoshop CC. Previously, add-ons and other non-application software had to be installed on a person's computer in order to take advantage of such powerful new editing capabilities. Built for the Internet of Things, the new Edit by WiFi option in Photoshop CC adds exciting new capabilities. The Edit by WiFi feature for the desktop enables Photoshop users to edit their photos in the cloud using mobile devices or

tablets via WiFi connection. This cuts down on a huge barrier to creativity and learning – it's easier and there's no need to buy a new computer.

Photoshop for the web and mobile also introduces new Layer Comps, new Extension Presets, and a new UI refresh to make working with layers more productive. Users can use Layer Composition to take assets from Photoshop for the web and mobile and quickly transfer them to Photoshop desktop for editing. All of the UI elements on the desktop and mobile are responsive, so you don't have to resize or adorn their container elements to different sizes to adapt to different screen sizes — your assets and Photoshop elements will always look great on screen. LOS ANGELES--(BUSINESS WIRE)-- Today, Adobe (Nasdaq:ADBE) announced at Adobe MAX – the world's largest creativity conference – new innovations in Photoshop that make the world's most advanced image editing application even smarter, more collaborative and easier to use across surfaces. Share for Review (beta) enables users to conveniently collaborate on projects without leaving Photoshop, and new features make editing images in a browser far more powerful. Additionally, the flagship Photoshop desktop app adds breakthrough features powered by Adobe Sensei AI, including selection improvements that enhance the accuracy and quality of selections, and a one-click Delete and Fill tool to remove and replace objects in images with a single action. In 1988, Thomas and John Knoll developed the first

basic version of Photoshop. Later, it was taken over by Adobe systems. Then the software has been upgraded and updated with more advanced features, a set of tools, and commands. The Photoshop CC version is the latest version of the series and it is a part of the Adobe Creative Cloud branding. The Photoshop family has some other software, consisting of Photoshop lightroom, Photoshop elements, Photoshop fix, Photoshop express, and other software.

Make no mistake—despite the name, the Spark tool works on the whole image and doesn't just pick the longest lines that happen to be in your subject. The tool works hard to separate objects from background, especially if the subject is lit differently from the background. The Spark tool is useful for merging objects together as well as for breaking up objects that cross over one another. For larger, more defined objects, you can use the Refine Edge tool to fine-tune the edges of the selection and make the rest of the selection look more natural. Photoshop now has multi-threaded rendering, which contributes to some of the desktop's fastest performance. Real-time progress bars and a new progress view in the History panel help communicate the amount of work still in the pipeline. The new Lab panel offers more types of precision, including Pantone colors, in addition to the traditional RGB and CMYK. It's still not all upside though. Adobe still hasn't updated Photoshop to support HDR, and the RAW Converter tool in Photoshop alone doesn't support all of the features available in Lightroom. Frontside caching relies on ips profiles instead of the more reliable hardware-accelerated AdobeRGB profile cache. And there's no Flash export. Finally, it's pretty clear that Adobe isn't entirely sure how much demand users there are for Photoshop's web features yet. After all, there are likely better options such as the web-browsing-related web apps of online photo editors, or even a fully-fledged online version of Photoshop. If Adobe can't make web-based Photoshop a worthwhile upgrade and start generating more business, it will put it's future in jeopardy.
