That said, Lightroom is still a great product, and I have no qualms recommending it to amateur photographers looking to edit some photos. As is the case with other programs from Adobe, Lightroom is an excellent tutorial for the basics of image editing (and can even be used as an 'expert mode' for those who are fairly comfortable with the basics of editing photos). Besides the new interface, there are a few new features and enhancements. In my view, they are beneficial for people looking to do more with their images. Others, though, may not see the benefit, but that's their loss as I do. One of the reasons I like Lightroom is that it is really simple to work with for newcomers. I've found that most people don't need to learn from scratch the basics of image editing, so they can start getting into the more advanced features over time. Because they don't want to spend a lot of time building up their skills, they can start doing more with their images using notions such as 'Presets' and 'Smart Toning'. That last point is where Photo Elements can help, as trying to explain the intricacies of toning, shooting, etc. to a novice is a lot easier when they can see the results of what they are doing. This is where experience and practice comes in handy. Now, you can have keyboard shortcuts for actions that you can paint onto layers. For example, if you want to change one of the colors or contrast of a photo, you can do so on one or many 'layers' while the photo is open in Adobe Photoshop. It's easy to manipulate and edit those layers together. New layers can be grouped together in a layer group for further edits.
